FOUNDERSLIVE MOMBASA · DEALS DEN · 29 OCTOBER 2026

Snack Quest

Managed vending for Kenya. We sell vending machines, make them take M-Pesa reliably, run them for their owners and keep them stocked, for a monthly fee.

RAISING UP TO KSH 10M · FIRST CLOSE KSH 3M

Kelvin Kimathi, Founder & CEO · snackquests.shop

THE PROBLEM

People want to own vending machines. Running one in Kenya is the hard part.

WHAT MACHINE OWNERS TOLD US

- **M-Pesa terminals** at the machine that are unreliable or expensive to run
- **No way to take Kenyan bank cards** at the machine
- **Stock, restocking and servicing** all fall on the owner

From our conversations with owners, not a market-wide measurement.

WHO WANTS IN · FROM OUR ADS, OCTOBER 2026

200+ **People asked about buying** and running a vending machine — ENQUIRIES

80 **Say they have the money now**, or will by 1 November — STATED

Expressions of interest, not sales.

Our bet: owners will pay every month for a machine that takes payments reliably, reports its sales and stays stocked.

THE SOLUTION

One service: the machine, the payments, the running and the stock.

ONE-OFF

Machine

We source the machine and sell it to the owner.

OWNER PAYS ONCE

M-PESA: BUILT, NOT YET LIVE

Payments

M-Pesa at the machine through our own software. Bank cards only through a licensed acquirer.

INCLUDED IN THE FEE

TARGET KSH 8,000 / MONTH

Management

Monitoring, sales reports, restock and service coordination.

OWNER PAYS MONTHLY

EVERY RESTOCK

Stock

About half imported Asian snacks, half Kenyan favourites, supplied at wholesale.

OWNER PAYS PER ORDER

Data from every machine: what sells, where, at what price, how often it needs restocking.

Later: Snack Quest sections in mini-markets and supermarkets, stocked with what the machines prove. FUTURE

Machine sales get us onto the site. The monthly fee and the stock keep us there.

TRACTION

What we have proven, and what we have not.

MEASURED · ONLINE, 23 AUG - 21 SEP 2026

KSh 102,700
Revenue, 24 paying customers

KSh 4,279
Average order

27.1%
Gross margin, stock bought locally

0
Repeat purchases in the period

The lesson: people pay for imported snacks, but a box is a treat, not an everyday buy.

VENDING PIPELINE · OCTOBER 2026

200+	Enquiries about owning a machine	INTEREST
80	Say funds ready by 1 November	STATED
9	Existing machines discussed for our stock: two owners, one at JKIA	NOT SIGNED
1	Buyer committed, sale targeted before December	COMMITTED

BUILT

- **Online shop** with M-Pesa checkout, custom boxes, 62 snacks
- **Cost and margin** recorded on every order
- **Machine software**: M-Pesa checkout at the machine, monitoring, restock and technician jobs, owner portal. Built for one controller board; tested only on a simulator so far
- **177.8K TikTok views** in 28 days; 33 creators on tracked links, 3 attributed sales by 21 Sep

No vending revenue yet. We count a sale when money moves.

BUSINESS MODEL

Who pays us, and why they keep paying.

REVENUE STREAM	WHO PAYS, AND WHEN	STATUS
Machine sales	The owner, once	PRICE NOT SET
Management fee	The owner, monthly: target KSh 8,000 per machine	TO TEST
Wholesale snacks	The owner, every restock; later other operators	PILOT
Retail supply	Mini-markets and supermarkets	FUTURE

What KSh 8,000 a month has to buy

- Payment setup and support
- Remote alerts: sales, stock, temperature, faults
- Monthly sales report and an owner dashboard
- Restock scheduling and delivery
- Service calls coordinated within an agreed time

Not included: stock, spare parts, major repairs, site rent. Proposed scope, to be tested with the first owners.

We will report recurring revenue first: paying machines times the fee, plus gross profit on stock. Machine sales are the way in.

UNIT ECONOMICS

What 20 machines could earn, and what we still have to measure.

MANAGEMENT FEE · TARGET

KSh 160,000

a month from 20 machines at KSh 8,000; KSh 1.92M a year.

Before servicing costs, churn, discounts and unpaid fees. Twenty machines are twenty subscribers only if twenty owners sign and pay.

STOCK · PER MACHINE

KSh 2,710–3,500

gross profit on every KSh 10,000 of stock a machine sells: 27.1% today, 35% our floor.

Sales per machine: unknown until machines trade on our stock.

MACHINE SALE · PER MACHINE

Not set

Landed cost: KSh 300,000 machine plus USD 1,000 to fit our system (both quoted), plus freight, duty and VAT (to confirm).

Selling price follows the landed cost.

At the plan's team cost of about KSh 267,000 a month, fees alone need 34 paying machines. Stock margin has to carry the rest, so we measure it from the first restock.

Sales per machine | Margin by product and site | Cost to serve a machine | Paid vends that dispense | Uptime | Fee collection and churn

GO-TO-MARKET

Prove it on real machines, then sell new ones.

1. **Pilot on real machines**
   Our demo machine proves payments end to end. The nine existing machines (two owners, one at JKIA) test stock, restocking and the fee; their payments depend on each machine's hardware.

2. **Convert the 80**
   Every machine sold with a management contract, deposit first. The USIU buyer first.

3. **Reach 20 paying machines**
   Airports, campuses, offices, hospitals, hotels, compared on real sales and a 50/50 imported and local mix that changes with the data.

4. **Take the winners to shops** FUTURE
   Mini-markets, then supermarkets, with sell-through data in hand.

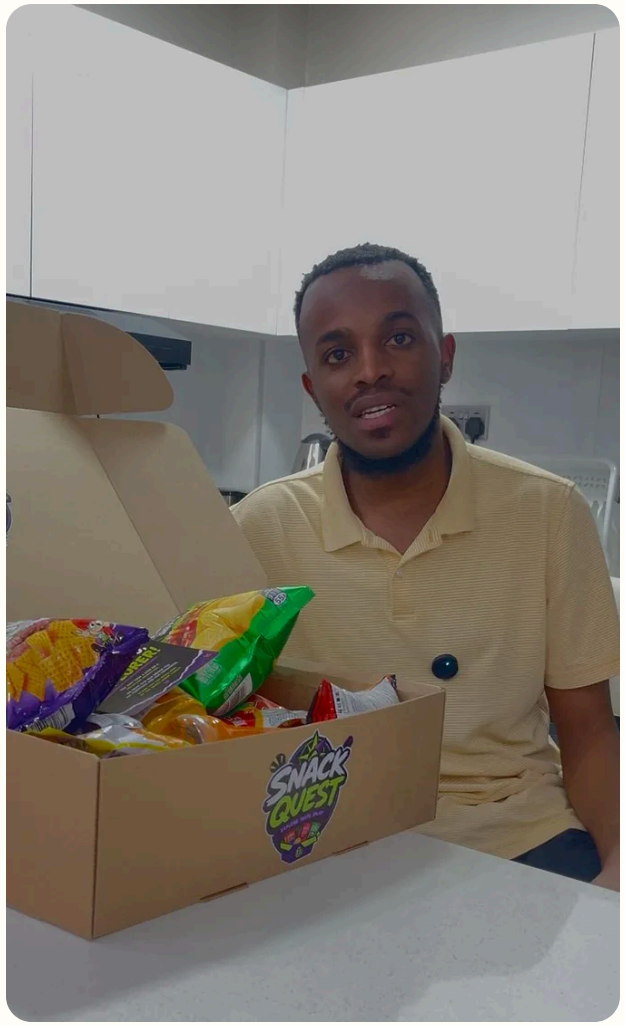

Why owners would choose us

- **One supplier** for the machine, payments, running and stock TO PROVE
- **Software we built**: M-Pesa checkout, monitoring, restock jobs, owner portal BUILT NOT FIELD-TESTED
- **Owner demand** from our own ads: 200+ enquiries INTEREST
- **Sales data** that matches products to sites GROWS WITH THE NETWORK
- **A brand creators film**: 177.8K views in 28 days EARLY

Anyone can import a machine. The edge we are building is the combination: payments that work, a machine someone runs, and stock that sells.

TEAM

A growth marketer who builds the systems.

Kelvin Kimathi

FOUNDER & CEO

Marketing manager at a Kenyan betting operator, part of its growth from launch: paid acquisition at scale. Built Snack Quest's shop, M-Pesa checkout, per-order margin tracking and the machine-management software. Full-time on Snack Quest from close.

Today

Two people: the founder, and one employee packing and dispatching orders.

Hiring first

A field technician to restock and service machines; then customer support and sales.

Advisers wanted

Payments and card acquiring; vending hardware; import and customs.

THE ASK

KSh 3M to prove owners will pay every month.

Raising up to KSh 10M, straight equity, percentage to be agreed. KSh 3M now; KSh 7M when the gates are met.

FIRST CLOSE · KSH 3M

People, 3 months: founder, field technician, support	800,000
Pilot stock, imported and local, for the pilot machines	550,000
One demo machine fitted with our system	430,000
Legal: contracts, who holds takings, data protection	350,000
Payments pilot: M-Pesa on site, card-acquirer talks	250,000
Sales to convert enquiries, 3 months	200,000
Restock motorbike	175,000
Contingency	145,000
Company setup	100,000
Total	**KSh 3,000,000**

GATES FOR THE SECOND CLOSE · PROPOSED

- **Payments:** our system live on the demo machine and every machine we sell; at least 95% of paid vends dispense or are refunded
- **Subscriptions:** at least five machines paying the management fee two months running
- **Sales:** at least five machines sold with deposits and management contracts
- **Stock:** margin measured by product and site; imported stock at 35% or better
- **Uptime:** at least 95% across the pilot

Then KSh 7M funds machine imports against deposits, stock and the field team for 20+ machines. Cards and supermarkets only once their gates are met.

Owners fund the machines. We earn on every month they run.
